# CHOOSING THE PERFECT LIGHTING FOR YOUR HOME

Lighting in your home is one of those items that you don't always notice when it has a good presence and feeling when you're in the space. Although, when the lighting is poor and you are trying to perform a task, or you feel the opposite of how you would like to feel in the space, you notice it immediately. Lighting is for ambiance, aesthetics, tasks, and seeing better in your home. Think about your home and if it has all the lighting qualities you would like. If your answer is no, here are some tips on how to choose the perfect lighting for you and your family.

Determine what your lighting goals are: *Direct or task lighting is focused in the space you are trying to work. Ambient or indirect lighting is used for ambiance and for overall lighting of a space. Once chosen you can begin to choose lighting options. Each room in your home should have a mood you want to set, as well as a function you want your lighting to serve.*

Provide lighting for safety and security on the exterior of your home: *Walkways, sidewalks, perimeter of your house, and the front entry should be lit with ambient lighting. Too dim of lighting on the exterior is a welcome sign for intruders. While too bright of exterior lighting is costly and disturbing to neighbors. Consider installing flood lights at the exterior corners of your home that are motion activated to further deter intruders. Follow the aesthetics and security lighting of your neighborhood for further guidelines as to what to implement at your own home.*

Use exterior wall sconces for decor: *Outdoor lighting doesn't have to only be utilitarian. Wall sconces can provide washes of light against the exterior walls of your home to create ambiance in the evening hours. Directional sconces pointing upwards or downwards can focus on architectural elements on your home, and draw attention to exterior niches and plantings around your home.*

Inside your home use multiple light sources for one space: *For rooms like the kitchen, bedrooms, and living spaces, multiple light sources will help you achieve a variety of functions and activities in that space. In the kitchen, under counter lights can provide great task lighting. While in a living room, opt for a floor lamp next to a couch or favorite reading chair. In bathrooms the lighting at the mirror should be free from shadows and glaring light.*

For high ceilings and modern decor use recessed lighting: *"Can" light fixtures, so called because of the metal recessed "can" that is inserted into the ceiling and the light fixture fits inside. These fixtures are subtle and can be directional, and can be connected to dimmer switches to give a range of light from subtly dim to full brightness to illuminate an entire room.*

In nurseries and kid's rooms, remember night lighting: *Think about the lighting for when children sleep when planning lighting requirements. Night lights can help small children from being scared, but can also help parents navigate through dark rooms. For nurseries consider a dim wall sconce, or table lamp that can be used for changing diapers, or rocking infants to sleep.*

In formal living and dining areas, research chandeliers wisely: *In spaces that a formal chandelier is considered, choose one that will not date your space. Often time's chandeliers are bought without thinking of the space and the decor that surrounds it. Chandeliers come in extremely simple designs that include faux candles, small bulbs, or a few lights to the ornate and expensive crystal varieties. Whichever is your decor choice, measure out the space, and ceiling height before ordering to ensure enough head room will be available below the hanging chandelier.*

Don't be afraid when choosing lighting for your home, it can help your ambiance and mood in the space. If you need lighting help ideas get inspiration from lighting stores, catalogs, and online decor and fashion blogs/magazines. Just like the color of your rooms, lighting should enhance your space and make it feel warm and inviting!

## TOOLS & MATERIALS

### WALL LAMP

Wall lamps can be turned on by selecting the use option on the wall it is attached to. Wall lamps can only be on the south or east side of a wall.

### CEILING LAMP

Ceiling lights can not only light up your whole room – they're a great way to show off your style, too. From spotlights to flush ceiling lamps to pendants that make a design statement, we have a wide selection to help you fit your space, style and lighting needs.

### TABLE LAMP

Table lamps let you fine-tune the atmosphere of a room in more ways than one. They give you additional light where you need it while also adding a bit of personality. Ours are available in a wide selection of styles to add a little extra color, texture and light to your home.

### FLOOR LAMP

Floor lamp lighting can help to add extra style to a room as well as making the most out of open and empty space. There are many designs of floor lamp lighting to pick from. So it should be easy to find one which you like and will mesh well with your home.

### PENDANT

Pendant lights are often used in multiples, hung in a straight line over kitchen countertops and dinette sets or sometimes in bathrooms. Pendants come in a huge variety of sizes and vary in materials from metal to glass and plastic. Many modern pendants are energy-saving low voltage models and some use halogen or fluorescent bulbs.

### CHANDELIER

Chandeliers are often ornate, and normally use lamps. Crystal chandeliers have more or less complex arrays of crystal prisms to illuminate a room with refracted light.

### LIGHTSWITCH

Light switches may be single or multiple, designed for indoor or outdoor use. Optional extras may include dimmer-controls, environmental protection, weather and security protection.

### LIGHT BULBS

Light bulbs components usually have a base of ceramic, metal, glass or plastic, which makes an electrical connection in the socket of a light fixture. This connection may be made with a screw-thread base, two metal pins, two metal caps or a bayonet cap.

## LIGHTING IN DIFFERENT ROOMS

### LIVING ROOM

*This room needs to cater for a range of family requirements: reading, watching television, entertaining, children's play. So the general diffused lighting of overhead fittings is a start, but add directional lighting with spotlights and reading lamps; use recessed or surface mounted spotlights to accent features or pictures, or 'wash walls with light. Table and standard lamps can also be used to provide soft pools of light to create a relaxing atmosphere, while dimmer switches, which are wired in the same way as ordinary switches, allow you to control the overall light levels. Changing shades on your ceiling pendant or free-standing lamps is a quick and easy way to update the decor in your room – you can introduce a bit of accent colour or pattern with the minimum of fuss and without over-powering the room. Or make a statement by replacing the central single pendant with a multi-arm ceiling pendant.*

### DINING ROOM

*Dining should be a pleasurable experience, something to linger over, so you don't want a dining room to have a cold atmosphere. You need a light over the table, but control it with a dimmer switch so that you can adjust the light level; that way, you will be able to see what you are eating without being bathed in harsh glare. Picking out features in the room with accent lighting will provide added interest, and pastel-coloured bulbs will soften the atmosphere and enhance a colour scheme.*

### BEDROOM

*Make the most of lighting to create a cosy atmosphere in the bedroom. Use recessed spotlights, wall lights and table lamps to generate a soft light, but provide task lighting for reading in bed and using a dressing table. Free-standing uplighters can provide soft ambient lighting for adult's bedrooms, but are not a good idea for children's bedrooms, where the temptation to throw paper or objects into them makes them a fire hazard. For kids' rooms there is a range of portable lights that are both fun and safe as they're cool to touch. The range includes famous characters and has something for all age groups, boys and girls.*

### EXTERIOR

*Whether your goal is to enhance the beauty of your home, or provide additional security, you have numerous lighting options to light up your home's exterior. These lights are both functional and fun! Extend the hours you can spend outside, or create a festive environment! The selection of lighting fixtures is of two primary types: decorative and functional. Be mindful, however that most lantern-style fixtures are glaring light sources. Hidden lights are strategically positioned around the property to selectively illuminate plant material and architecture. Add landscape lighting, deck lighting, and step lighting to not only bring out the beauty of the home at night, but also add extra security and safety.*

## TYPES OF LAMP BULB

### GLS (GENERAL LIGHTING SERVICE)

*These are the most commonly used lamps and are found in most light fittings. They may be clear, translucent (pearl) or opaque (in a choice of colours). They are available in a range of sizes and shapes, from the pear and mushroom to candle types. Large-diameter versions are available and are intended to be on view, without shades. All provide a general diffused light.*

### REFLECTOR

*These lamps produce strong directional beams of light in spotlight and floodlight fittings. All have some form of silvering on the bulb that helps throw the light in a particular direction. Crown-silvered types direct light back on to a separate reflector that throws it forward; internally-silvered types do not need a reflector, since their design aims the beam forward. A third type, the PAR (parabolic aluminised reflector), has a conical shape and comes in a variety of beam widths.*

### TUBES

*These are long glass cylinders with metal end caps. Different hues of white are available in fluorescent bulbs. These range from warm white (2700K) through medium (3000K) to blue-ish white (3500K and above). The Kelvin figures are sometimes incorporated in the bulb part number (e.g. /827 for warm white, /835 for blue). Various lengths, and even circular versions, are available for a range of fittings. Their use has limitations in domestic situations, although they are ideal for garages and home workshops. Another type of tube is the tungsten-filament type, essentially a tubular version of the standard GLS lamp. This is quite small (up to 285mm long) and may be clear or pearl. In the main, this kind of tube is used for concealed lighting.*

### HALOGEN

*Halogen lamps produce a crisp, clean white light – brighter than a standard bulb of the same wattage. They bring out the detail of an interior, and are also particularly good for reading and closework, helping avoid eye strain. They do get extremely hot, so must only be used in a suitable fitting. They are suitable for spotlights and recessed lighting.*

### LOW-VOLTAGE HALOGEN

*Low-voltage lighting uses halogen bulbs that run at 12 volts rather than the usual 240. The current is supplied via a transformer which may be built into the light fitting, or in a separate location.*

### CFL (COMPACT FLUORESCENT LAMPS)

*Otherwise known as low energy bulbs, these combine the construction of a fluorescent tube with the compact dimensions of normal GLS lamps, and they will fit standard light fittings. They use about 20% of the electricity of a comparable GLS lamp. The life of the bulb varies depending on the type you buy but it is typically between 6 and 10 years. There is now a wide choice of shapes available in CFL bulbs, so there should be a low energy option available for most fittings.*

### LED (LIGHT-EMITTING DIODE)

*An LED lamp is a product that is assembled into a lamp (or light bulb) for use in lighting fixtures. LED lamps have a lifespan and electrical efficiency that is several times better than incandescent lamps, and significantly better than most fluorescent lamps, with some chips able to emit more than 100 lumens per watt.*

*Like incandescent lamps and unlike most fluorescent lamps (e.g. tubes and CFL), LED lights come to full brightness without need for a warm-up time; the life of fluorescent lighting is also reduced by frequent switching on and off. Initial cost of LED is usually higher. Degradation of LED dye and packaging materials reduces light output to some extent over time.*

## LAYERING THE LIGHTING

Good lighting enables activity, enhances color, and – most importantly – gives a room a sense of warmth and life. Light fixtures also bring fun and fashion to a space. Use lighting in practical and provocative ways to alter the mood in your living room.

One of the keys to creating a comfortable and flexible room is to layer the lighting. Use a mix of ambient, task, and accent lighting to delineate different zones. Establish a plan that allows you to adjust the room's illumination levels gradually from bright to dim to suit your needs.

Begin with the ambient, or general, layer; this is the light that simply makes the room visible. Next, consider the task lights you'll need for you and your family to read, work, or play. Add an accent layer – fixtures that focus on objects or architectural features you want to highlight or light sources that create specific moods.

### AMBIENT LIGHTING

*Think of ambient lighting as your living room's overall light wash, whether it's sunlight streaming in through the windows during the day or overhead lights casting a warm glow through the room at night. Ambient light is the basic lighting layer, illuminating walls, open areas, and main pieces of furniture so that you can navigate the space with ease. Ambient light can be direct, bounced off a wall, or diffused through a shade to warm up the quality of the light. Dimmer switches allow you to modulate lighting to suit different moods and occasions.*

*SUSPENDED UPLIGHTS are ceiling-mounted fixtures that cast light upward and give an even glow.*

*PENDANTS hang from the ceiling. They come in different shapes and styles that can add another decorative element to a room.*

### TASK LIGHTING

*Designed to help you perform activities at close range, task lighting is a more location-specific layer of light than ambient lighting. Place wall sconces behind the sofa to facilitate reading, or use a swing-arm table lamp on a side or parson's table. Hang a pendant lamp low over a game table. Think about brightness, beam direction, proximity of the fixture to the task area, and the bulb's color temperature (its relative value of warmth or coolness) when selecting task-oriented lighting.*

*TABLE LAMPS come in a variety of shapes, sizes, and wattages. For versatility, choose one that takes a three-way bulb.*

*SWING-ARM LAMPS have adjustable arms that allow the light to be swung into position.*

*SCONCES attach directly to the wall and can offer useful supplementary lighting.*

*FLOOR LAMPS are freestanding and may be adjustable in height.*

### ACCENT LIGHTING

*Accent lighting provides dramatic spots of light wherever you want them and is the layer that allows you to change a room's mood and style most easily. Typically using narrow-beam lightbulbs, accent lights let you direct the eye to those objects or places in the room you find most visually appealing. Spotlight a favorite painting or sculpture on a wall or mantel, highlight a pleasingly textured wall with track lighting spots, or dot candles throughout the room to create a warm, natural glow.*

*MINI-CHANDELIERS hang from the ceiling and add sparkle.*

*TRACK LIGHTS can be aimed to highlight architectural details and favorite objects.*

*CANDLES fill a room with warmth and animation; they can add color and scent as well.*
