

## Frequently Asked Questions

- **Do I have to be actively practicing dentistry to participate?** No, just a current dental license
- **What technologies do I need?** You will need highspeed internet connection, a computer with a camera and microphone
- **How can I see in the mouth with only a video screen?**  
Remember you are triaging this patient to a treating dentist. You are putting your years of training and practice to good use!
- **How can I make an appointment for the patient?** We have a built-in system for this purpose. You just pass the patient to us and we handle the rest.

Be a TeleDental Consultant and  
work from home (or anywhere)!

## What is TeleDentistry?

It's not a traveling intraoral camera!

Every year over a million people visit an emergency department for oral complaints! That's over \$2 Billion spent in the wrong place!

Our mission is to divert these patients away from hours of wait time and thousands of dollars of expense to an appropriate dental home and proper dental treatment.

Using telemedicine technology, this is now possible through The TeleDentists!

## How Does it Work?

Millions of Americans now enjoy the benefits of telemedicine coverage. By enrolling in a telemedicine plan, patients have access to a broad range of medical specialists – now including Dentistry!

## How Does a Patient Get To Me?

When a patient enters their telehealth portal, they are directed to complete their health history and chief complaint forms on the TeleDentists landing page. They are then routed directly to our bench of on-call dentists licensed in their state. Our active dentists in that state will receive notification that a patient is waiting to be seen.

## Will I See An XRay?

Just like your initial assessment in your office, you will be able to see the patient and ask pertinent questions. Your assessment is used as a screening tool for the dentist actually performing any treatment

## Is Your System Secure?

We use one of the most secure and widely utilized telemedicine platforms in the world. All of our technologies are HIPPA compliant and encrypted for reliable security.
